OBJECTIVE

Who I am: A Computer Science Engineering Diploma student (3rd Year, 5th Semester) and PGDCA learner with hands-on project experience in Python, FastAPI, MySQL, Flutter and basic AI/ML.
What I can do: Build end-to-end academic and prototype applications — backend APIs, databases, and mobile/web interfaces — and apply basic AI/ML concepts to real problems.

How I can contribute: By applying strong programming, SQL and Git/GitHub fundamentals to learn fast, take ownership of development work, and deliver reliable software as an intern or entry-level developer.

Smart Classroom & Timetable Scheduler

Technologies: Python, FastAPI, MySQL, React, Flutter, Constraint-based Scheduling

Started as a team prototype for Smart India Hackathon (SIH) and qualified the internal round; later independently developed the complete application end-to-end.

Developed an academic timetable management system with timetable generation using constraint-based scheduling.

Added modules for student, teacher, subject, classroom and teacher-subject management, plus attendance tracking.

Developed REST APIs using FastAPI, connected to MySQL, with web and Flutter interfaces.

AI-Powered Meeting Summarizer

Technologies: Python, Flask, Whisper, Transformers, ReportLab, Flutter

Converted recorded audio into text using Whisper and generated concise summaries using a Transformer-based model.

Implemented PDF report generation (ReportLab), a Flask API, and Flutter integration for audio upload and results.

Spam SMS Detection

*Technologies: Python, Pandas, NumPy, Scikit-learn, CountVectorizer, Multinomial Naive Bayes*Built a machine-learning model to classify SMS messages as spam or ham using CountVectorizer and Multinomial Naive Bayes, tested on a labelled dataset.

Women Safety Band

Technologies: Embedded Systems / IoT Concepts

Designed a women-safety wearable concept with panic button, location tracking and emergency alert
